

Tips for using the NoPests® Multifeeder Bait Station for Pindone Rabbit Bait

Note: Pindone Rabbit Bait must only be used in a Bait Station. It is illegal to broadcast Pindone Rabbit Bait on the ground as pets, non-target wildlife and children may be at risk.

1. Half fill Bait Station by removing end cap. To avoid spillage, this may be easier to do with holes closed off.
2. Twist the Multifeeder holes so they are presented at an angle for the rabbits to feed easily. They do not like a vertical presentation
3. Place Bait Station in the open where rabbits normally feed or next to a 'run' where rabbits pass through a fence or hedge.
4. Place on short grass or bare ground where rabbits frequently feed or where droppings are noticed.
5. Turning some sods of dirt in front of the bait station can encourage rabbits to investigate the bait station and bait.
6. As rabbits are neo-phobic place Multifeeder bait station in feeding location for 7-12 days before baiting to allow rabbits time to adjust to its presence.
7. Timing of baiting is important as it can be difficult to compete against readily available food e.g. spring flush.
8. The NoPests Multifeeder allows 2-3 Rabbits to feed simultaneously.
9. Ensure enough stations are in place as dominant males will prevent lower hierarchy rabbits from feeding.
10. Close the Multifeeder during rain to prevent bait from becoming soggy
11. Close the Multifeeder during the day if birds are stealing the bait.
12. Re-open the Multifeeder at dusk as birds retire to roost for the night.
13. The NoPests Multifeeder does not need to be fixed to any structure or fence to be effective.
